W3CC022 Center for Sustainable Urban Living: A New Model for Student Success

Devon Patterson, Principal, Solomon Cordwell Buenz

Nancy Tuchman, Vice Provost and Professor of Biology, Loyola University Chicago

Robert Kelly, Vice President for Student Development, Loyola University Chicago

James Curtin, AIA, Principal, Solomon Cordwell Buenz

Session Description:

The Center for Sustainable Urban Living, (CSUL), is the next step in the evolution of student housing with academic integration and sustainability goals set in an urban environment. CSUL recalls the Jeffersonian academic model of integrated living and learning by combining student residential living spaces with experiential learning facilities. The design integrates different program elements and high-performance building systems, including a hybrid geothermal system resulting in a Net Zero Ready community. The greenhouse is the nexus of the CSUL complex. Loyola University of Chicago seeks to advance current models of living and learning in a manner that will contribute in new ways to student success and institutional advancement.

Learning Objectives:

- 1.) Review of historical precedents for academic and living environments.
- 2.) Learn about the progression of student and academic building prototypes.
- 3.) Review of Loyola University of Chicago needs that precipitated the new vision.
- 4.) Discussion of the integration of vision and approach with sustainable goals and urban setting.

Room: S210C

AIA CEH: 1 LU/HSW/SD

GBCI CE: 1 Hour
