Prerequisite: None

## **W3CC016 Personal Learning: The Dawn of Mass Customization of Education**

**Nancy Sturm, Principal, The Sextant Group**

**Brian Patrick, CTS-D, Principal, The Sextant Group**

### **Session Description:**

The recent economic recession has exposed fundamental weaknesses in the financial model underlying support of public two-year and four-year institutions. Demand for post-secondary education continues to soar even as the US job market lags in the post-recession recovery. Meanwhile, districts, colleges, and universities are still in the crosswinds of facilities replacement, renovation, and expansion that began a decade ago. In the midst of this turbulence, real change is emerging in the marketplace. This session explores economic realities, market trends in technology, teaching, and learning, and presents a scenario of future educational paradigms.

### **Learning Objectives:**

1.) Understand the impact the economy is having on educational delivery and facilities. 2.) Understand emerging changes to facilities design necessary to adapt to active learning pedagogy. 3.) Learn about emerging technologies that will have an impact on educational spaces in the future. 4.) Understand how future-thinking infrastructure design can reduce long-term costs.
