W2CC057 Planning Schools for the Innovation Generation

**Steven Turckes, AIA, REFP, LEED AP, Principal,
Perkins+Will**

Session Description:

Studies show that students need to be able to create and innovate in order to be successful in our rapidly evolving, global economy. What might the educational processes, programs and spaces that foster these creative skills look like? This provocative session surveys a number of writings surrounding the process of innovation in an attempt to reveal innovation's "secret sauce" and how these ingredients can inform decisions about education and facilities. Via a case study of the recently completed Center for Advanced Professional Studies (CAPS) for Blue Valley Schools, explore how these concepts influence the planning process, as well as educational and facility outcomes.

Learning Objectives:

1.) Learn about the latest research on creativity and innovation. 2.) Discover the ingredients that foster innovation in corporate America, and how those can be translated into educational facility solutions. 3.) Learn about the Edison Innovation "Gold Award" winning CAPS, and how this program fosters innovation and creativity in its students. 4.) Discuss participants own schools and how these ideas might benefit them.
