R8CC017 Sustainable Projects on a Charter School Budget

Lawrence Kearns, AIA, Principal, Wheeler Kearns Architects

Session Description:

This session details two recent charter school LEED projects completed on tight budgets while providing maximum value. The first, Muchin College Prep, was Chicago's first high school in a multiuse high-rise. The second, Exelon Gymnasium, provided a school, in a blighted neighborhood, a cost-effective, day lit, multiuse space.

Learning Objectives:

1.) Discuss priorities of charter school clients and the unique spaces that support their mission. 2.) Learn about cost-effective, sustainable strategies that can be deployed in unorthodox locations. 3.) Explore emerging technologies deployed in typical classrooms to maximize their utility. 4.) What to look for in a prospective campus.
